

SECUBOND

A Bowmer Bond Innovation

INTRODUCING **SecuBond™**

With quality and innovation at its core,
Bowmer Bond introduces SecuBond™, a range
of PVC coated weldable webbing solutions

SecuBond™ products combine cost-effective solutions with
assured strength, durability, flexibility and performance

With innovation at its core, SecuBond™ offers PVC coated weldable webbing solutions to deliver guaranteed strength, durability, flexibility and performance.

The SecuBond™ range includes:

SecuBond™ Zip

A ground-breaking solution for the fast, effective joining of textile structures. PVC-coated after weaving, it completely eliminates the need for sewing while ensuring joins are durable and water-resistant.

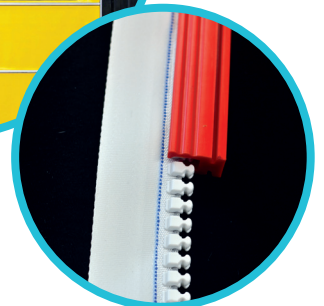

SecuBond™ Para-Aramid Webbing

A range of para-aramid webbings engineered to satisfy applications requiring more specialist performance such as tensile strength and elongation control.

SecuBond™ Bead and Zip Keder

Our moulded, weldable Zip Keder technology allows greater flexibility compared to traditional Keder products. Able to work around small radius corners or rolled up, it is ideal for use in high speed roller doors.

Our PVC-coated, weldable Bead Keder solution can run either vertically and horizontally in a side guide or similar channel. Available in a range of optional configurations to suit your application.

SecuBond™ Woven-Loop

The woven-loop design offers a PVC-coated weldable surface on one side and an attachment loop on the other. The strong structure, with a breaking strain of 175 Kgf, removes the need for metal grommets or pre-assembly.

SecuBond™ Webbing

Available in a range of colours, our market-leading product delivers quality, reliability and performance as well as fast welding speeds and strength of weld. These benefits make the webbing ideal for a broad range of industries and applications.

The versatile core feature of the range, the PVC coated weldable webbing, provides infinite capabilities across diverse sectors.

A selection of common applications includes:

- Curtainsider trucks
- Signage, banners and building wraps
- Biogas and general agricultural covers (i.e. Silo covers)
- Tensile structures
- Marquees and tents
- Swimming pool covers
- Oil retention inflatable booms
