

SECUBOND

A Bowmer Bond Innovation

Secubond[®]

PVC-coated Weldable Webbing Solutions

High-performance PVC-coated weldable webbings,
developed for demanding applications.

From proven standard products to fully tailored solutions, Secubond[®]
combines durability, weldability and dependable performance with
the flexibility to meet your specific application needs.

MORE THAN A STANDARD PVC-COATED WEBBING RANGE

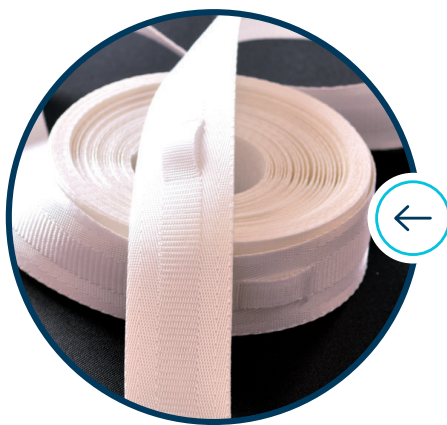

Secubond® combines established standard products with the flexibility to develop tailored solutions for specific application requirements.

Secubond® Core Range

Secubond® Webbing

Our core product suitable for hot-air or HF welding. Available in a range of colours and configurations, with fast welding speeds, reliable weld strength and the flexibility to support both standard and application-specific requirements.

- Woven and coated in-house at our ISO 9001-certified production facility
- Both standard 1300 Kgf and 2400 Kgf variants of the webbing meet the EN 12641-2:2019 strength requirements for curtainsider vehicles
- Externally tested by DEKRA

Secubond® Woven-Loop Webbing

A dual-function construction with a PVC-coated weldable face on one side and an attachment loop on the reverse. An ideal solution where a strong fixing detail is needed without metal eyelets or pre-assembly.

The latest version of this webbing features a flatter woven loop, designed to hold straps or fixings more securely in place prior to installation, including during processing and transit.

Secubond® Para-Aramid Webbing

A PVC-coated webbing engineered with a para-aramid substrate for specialist and demanding applications. It offers an effective combination of high strength, low weight, low elongation and dimensional stability, together with excellent resistance to heat, flame and mechanical stress.

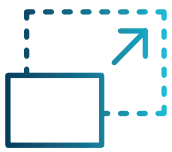

SECUBOND® IS A BOWMER BOND INNOVATION

Secubond® offers more than a standard PVC-coated webbing range. Alongside proven standard products, we work with customers to develop coated webbing solutions tailored to the demands of a specific application.

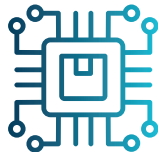

Customised Solutions

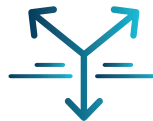

From strength, width and thickness to colour, construction and end-use performance, we can create a solution designed to work for the way your product needs to perform.
